

Grey2Green can confirm that our Green Roof system has taken into consideration compliance with the GRO Code (2021) as well as the Department for Communities; Fire Performance of Green Roofs and Walls. The DCLG technical document states that compliance against Broof(t4) is achieved by providing a growing medium with a minimum depth of 80mm and an organic content of less than 50%.

Grey2Green confirm that:

- The organic content of Grey2Green, green roof substrate is <20%.
- The depth of the substrate layer is a minimum of 60mm, with 20mm of growing medium on the sedum blanket. Totalling 80mm.
- Grey2Green substrate is tested in line with BS8616:2019.
